</tbody>
</table>

*Tularemia transmission vectors pinpointed by the patient were mosquitoes (m), ticks (t), horse flies (h), and unknown (–).

†Patient self-estimate of spatial data quality: 1, certain; 2, probable; 3, possible; 4, only residential address was available.

‡FSC, Francisella Strain Collection (FOI, Umeå, Sweden).

§The patient indicated multiple places of infection.

¶The patient indicated multiple places of infection with identical data quality estimates.
