

Correlation between Lack of Norovirus Replication and Histo-Blood Group Antigen Expression in 3-Dimensional Intestinal Epithelial Cells

Technical Appendix

Online Technical Appendix Figure. Three-dimensional INT-407 viability after 24-h lipopolysaccharide (LPS) treatment. The percentage viability of aggregates in Figure 5 was measured by trypan blue exclusion staining. Statistical comparisons were made between treated (0 $\mu\text{g/ml}$ LPS) and LPS-treated aggregates at each concentration using Student *t* test. **Indicates $p < 0.01$.
