

Severe Encephalitis Caused by Toscana Virus, Greece

Technical Appendix

Technical Appendix Figure. Computed tomography scan image of the brain of a 49-year-old female patient at admission to the emergency department of Trikala General Hospital, Trikala, Greece, June 2012. The woman had confusion and delirium. The scan shows dilated lateral ventricles and increased attenuation of the subarachnoid spaces due to edema. A Toscana virus strain was later detected in the patient.
