
Technical Appendix

**Technical Appendix Figure 1.** Cluster analysis of pulsed-field gel electrophoresis patterns of 3/O:3 *Yersinia enterocolitica* isolates obtained from children <5 years of age, pigs, and dogs by region, China,
2010–2015. Gels depict DNA digests with \textit{NotI}. Clustering trees indicate relatedness of strains. The proportion of each pattern detected per region for children, dogs, and pigs are indicated.

Technical Appendix Figure 2. Cluster analysis of pulsed-field gel electrophoresis patterns show that 3/O:3 \textit{Yersinia enterocolitica} isolates from 6 children \leq 5 years of age from Guangxi and Beijing share patterns indistinguishable from isolates found in pigs from other regions. Gels depict DNA digests with \textit{NotI}, and clustering trees indicate the relatedness of the isolates shown.
