

Severe Acute Respiratory Syndrome Coronavirus 2 Shedding by Travelers, Vietnam, 2020

Appendix

Appendix Figure. (A) Virus shedding patterns as detected in throat-swab samples from SARS-CoV-2 patients and (B) in serial throat-swab samples obtained from patient 2. Values were determined from median C_t values of E gene, N gene, and RdRp gene. Yellow region indicates average days between potential initial exposure and days of disease onset (9.9 ± 5.4 days).
