

# Invasive Pneumococcal Disease and Long-Term Mortality Rates in Adults, Alberta, Canada

## Appendix

**Appendix Table 1.** Demographic information comparing cases to controls, by year of IPD diagnosis or control pseudodiagnosis

| Characteristic  | >10 Years     |               | 5–10 Years  |              | <5 Years     |               |
|-----------------|---------------|---------------|-------------|--------------|--------------|---------------|
|                 | Cases         | Controls      | Cases       | Controls     | Cases        | Controls      |
| Totals, no. (%) | 2,014 (100%)  | 3,810 (100%)  | 882 (100%)  | 1,758 (100%) | 1,626 (100%) | 3,269 (100%)  |
| Sex, no. (%)    |               |               |             |              |              |               |
| Male            | 1,134 (56.3%) | 2,135 (56.0%) | 494 (56.0%) | 985 (56.0%)  | 937 (57.6%)  | 1,874 (57.3%) |
| Female          | 880 (43.7%)   | 1,675 (44.0%) | 388 (44.0%) | 773 (44.0%)  | 689 (42.4%)  | 1,395 (42.7%) |
| Age, y, no. (%) |               |               |             |              |              |               |
| <45             | 698 (34.7%)   | 1,321 (34.7%) | 232 (26.3%) | 465 (26.5%)  | 394 (24.2%)  | 793 (24.3%)   |
| 45–60           | 572 (28.3%)   | 1,091 (28.6%) | 309 (35.1%) | 616 (35.0%)  | 507 (31.2%)  | 1,028 (31.4%) |
| 60–75           | 390 (19.4%)   | 737 (19.3%)   | 212 (24.0%) | 421 (23.9%)  | 452 (27.8%)  | 902 (27.6%)   |
| ≥75             | 354 (17.6%)   | 661 (17.4%)   | 129 (14.6%) | 256 (14.6%)  | 273 (16.8%)  | 546 (16.7%)   |

**Appendix Table 2.** Full model variables with adjusted hazard ratios, by time interval

| Time, d | Case status              | Adjusted hazard ratios, p value (95%CI), by variable |                          |                             |                          |
|---------|--------------------------|--|--------------------------|-----------------------------|--------------------------|
|         |                          | Age 45–60 y*   | Age 60–75 y*             | Age ≥75 y*                  | Elixhauser score ≥2†     |
| <30     | 3.75, <0.001 (3.29–4.28) | 2.08, <0.001 (1.66–2.61)                             | 2.93, <0.001 (2.34–3.67) | 5.39, <0.001 (4.33–6.71)    | 1.76, <0.001 (1.44–2.16) |
| 30–90   | 1.56, <0.001 (1.27–1.93) | 2.39, <0.001 (1.60–3.57)                             | 3.89, <0.001 (2.62–5.75) | 7.92, <0.001 (5.41–11.61)   | 2.27, <0.001 (1.57–3.29) |
| >90     | 1.43, <0.001 (1.33–1.54) | 2.58, <0.001 (2.28–2.91)                             | 5.15, <0.001 (4.57–5.82) | 13.35, <0.001 (11.84–15.06) | 1.59, <0.001 (1.45–1.75) |
| Overall | 1.77, <0.001 (1.67–1.88) | 2.49, <0.001 (2.25–2.77)                             | 4.60, <0.001 (4.15–5.10) | 10.71, <0.001 (9.67–11.86)  | 1.66, <0.001 (1.53–1.80) |

\*Compared with age category <45 y.

†Compared with Elixhauser score <2.

**Appendix Table 3.** Adjusted hazard ratios (aHRs) for death risk, with 95% CI upper and lower limits

| Characteristic             | aHR  | Lower limit | Upper limit |
|----------------------------|------|-------------|-------------|
| Time from IPD diagnosis, d |      |             |             |
| <30                        | 3.75 | 3.29        | 4.28        |
| 30–90                      | 1.56 | 1.27        | 1.93        |
| >90                        | 1.43 | 1.33        | 1.54        |
| Overall                    | 1.77 | 1.67        | 1.88        |
| Time period, y             |      |             |             |
| <5                         | 1.67 | 1.48        | 1.89        |
| 5–10                       | 1.85 | 1.62        | 2.11        |
| >10                        | 1.80 | 1.66        | 1.94        |
