†Poverty levels were defined as the percentage of residents in the patient's ZIP code living below the federal poverty level according to the American Community Survey (<https://www.census.gov>). Neighborhoods were categorized by using the NYC DOHMH EpiQuery tool (<https://a816-health.nyc.gov/hdi/epiquery>) into 4 groups: low poverty, <10% of population; medium, 10%–19.9%; high, 20%–29.9%; and very high, ≥30%.

‡Total percentages include treated persons who had no prescription date (n = 22) and, therefore, could not be assigned to a 2-week interval period.
