

World Map of Areas with Risk of Zika

International areas and US territories

-  Area with risk of Zika infection (below 6,500 feet)*
-  Area with low likelihood of Zika infection (above 6,500 feet)*
-  Areas with no known risk of Zika infection

United States areas

-  State previously Reporting Zika
-  No Known Zika

*Mosquitoes that can spread Zika usually live in places below 6,500 feet. The chances of getting Zika from mosquitoes living above that height are very low.

Technical note: Because of variations in laboratory and surveillance capacity internationally, data are not available to define levels of risk. CDC, the World Health Organization, and the European CDC have jointly reviewed the scientific literature to define a Zika virus country classification scheme. CDC provides travel recommendations for countries/territories/subnational areas falling into Category 1, Category 2, and the Category 4 sub-group within the classification framework.
