

Possible Exposure: Ebola

What you need to do

You have been given this card because you might have been exposed to a person with Ebola.

- Ebola is a severe, often fatal disease that spreads through direct contact with an infected person's blood or body fluids (such as urine, saliva, sweat, feces, vomit, and semen).
- Symptoms appear within 21 days of exposure: fever, severe headache, muscle pain, vomiting, diarrhea, stomach pain, or unexplained bleeding or bruising.
- People exposed to Ebola cannot spread it to others unless they have fever or other symptoms of Ebola.

Currently you do not have symptoms consistent with Ebola. However, you should take precautions to protect yourself and others until 21 days after your last exposure to Ebola.

- Take your temperature every morning and evening, and watch for symptoms consistent with Ebola: fever, severe headache, muscle pain, vomiting, diarrhea, stomach pain, or unexplained bleeding or bruising.
- Check in regularly with your local health department according to their instructions.
- Tell the health department if you plan to travel more than 50 miles, to another state, or outside the United States.
- Do not travel on commercial planes, ships, trains, or long-distance buses.
- Call the health department immediately if you get a **fever* or other symptoms.**
 - ***Fever: temperature of 100.4°F / 38°C or higher or feeling like you have a fever.**
 - If you can't reach the health department, call a doctor; tell the doctor where you traveled and that you might have been exposed to Ebola.
 - Do not travel anywhere except to the doctor's office or hospital. Limit your contact with other people when you travel to the doctor. Do not use public transport to get to the medical facility. Only travel by private car or ambulance.
 - Bring this notice and give it to the health care staff when you arrive.

A Note to the Doctor

The patient giving you this card has potentially been exposed to a person with Ebola.

CDC recommends the following:

- Place the patient in a private room.
- Implement standard, contact, and droplet precautions as outlined in CDC guidance for health care providers. See link below.
- Evaluate the patient using clinical guidance and case definitions provided by CDC. See link below.
- If this patient has illness and exposure history consistent with Ebola:
 - Notify your local or state public health department of the patient.
 - The health department will provide guidance as to whether testing for Ebola is indicated.
- See www.naccho.org/about/lhd for your local health department contact information.
- If you are unable to reach your local or state health department, call the CDC Emergency Operations Center for assistance: 770-488-7100.
